1. Overview, Motivation, History

1.1 Title

Welcome to the Radar & Applications Course (RAC) conducted by the National Weather Service (NWS) Warning Decision Training Division (WDTD).
1.2 Overview

Notes:

The purpose of RAC is to train NWS forecasters (meteorologists and hydrologists) on the use of the WSR-88D radar in the forecast and warning decision making process.

Here is an overview of this presentation. Please take a moment to review it.
1.3 Motivation

RAC is important because its training is necessary for career advancement in the National Weather Service’s GS 5-12 1340 Competency-Based Model.
## 1.4 History of This Course

### History of This Course

<table>
<thead>
<tr>
<th>Course Description</th>

<tr>
<td></td>
<td>Norman (2005-present)</td>
</tr>
<tr>
<td>Radar &amp; Applications Course (RAC)</td>
<td>2015-Present</td>
</tr>
</tbody>
</table>

### Notes:

This course has steadily evolved over the years, but the focus has always been on the use of the WSR-88D in operations, particularly warning operations. It began in 1990 as the WSR-88D Operations Course which was taught as a 3 & 1/2 week in-residence course in Norman, Oklahoma. In 1997, it transitioned into the Distance Learning Operations Course (DLOC) and provided a blended learning approach which included web-based training, on-line modules, teletraining, and a 1-week workshop delivered at its conclusion. The name was changed to the Radar & Applications Course (RAC) in 2015 to provide a more accurate and meaningful description of the course, but it maintains the same format as DLOC.
2. CLC & WES-2 Bridge

2.1 Commerce Learning Center (CLC)

Notes:

We use the Commerce Learning Center (CLC) to track your completion of each part of the RAC: Lesson quizzes, WES activities, and ILTs. We recommend you bookmark the web address https://doc.csod.com. Most of the lessons are on-line training that you will launch directly from the CLC. Other training (such as AWIPS Warning Fundamentals) will be taken on your local WES machine, but you will need to come back to the CLC and take some action in order to show up as complete. Your point of contact is Andy Wood.
2.2 Commerce Learning Center (CLC): RAC Curricula

Your RAC Curriculum is your path to course completion. Use it to register for teletraining sessions and track your progress.

Notes:
2.3 Commerce Learning Center (CLC): Optimizing Use

Notes:

Google Chrome, Microsoft Edge, and Safari should all work effectively with the CLC.

If you have popup blockers on, you will not see the presentations appear when you select them unless you create an exception for the CLC and WDTD web sites.
2.4 WES-2 Bridge

*(Weather Event Simulator for AWIPS-2)*

**Notes:**

WES-2 Bridge is a weather event simulator for AWIPS-2. You will use it during both the distance learning and in-residence Workshop lab portions of RAC. Your point of contact for WES-2 Bridge support is Dale Morris.
3. Quizes and ILTs

3.1 Types of Training Modes

RAC presents training material in various ways. Some are self-paced modules on the Internet. Others are recorded “Articulate” modules where the instructor’s voice is paired with the relevant images. Another method is via live teletraining session where you and your classmates go through material together with a WDTD instructor. You must pre-register for each teletraining session via the RAC curriculum in the CLC and take it at the scheduled time.
3.2 End-of-Lesson Quizzes

End-of-Lesson Quizzes

- Must be completed on the Commerce Learning Center (CLC)
- Passing score is 70-80%

Notes:

Even though RAC lessons are available via our WDTD web page, End-of-Lesson Quizzes must be completed on the Commerce Learning Center (CLC) to receive completion credit. Passing score is 70-80%.
3.3 Instructor-Led-Teletraining (ILT): Overview

Notes:

Teletraining means we train live over the internet. The registration steps are:

1. Register for the Instructor-Led Training (ILT) sessions of your choice in your CLC curriculum.
   - Each student must register individually to receive credit
   - Register at least 24 hours in advance
2. Register for the accompanying GoToMeeting webinar
   - Use instructions in your “Approval” Email sent by the CLC

1. Register for the instructor-led training (ILT) session of your choice in your Commerce Learning Center (CLC) curriculum.
   Each student must register individually to receive credit in the CLC, even if multiple students from the same office attend the same session. Register at least 24 hours in advance.

2. Register for the accompanying GoToMeeting webinar using instructions in your “Approval” Email sent by the CLC.
   Contact WDTD (nws.wdtd.rachelp@noaa.gov) if the Email hasn’t arrived within 24 hours (should come in just a few minutes)
3.4 Instructor-Led-Teletraining (ILT): Protocol

Instructor-Led-Teletraining (ILT): Protocol

- Dedicate time for your session
  - “Do not disturb!”
- Expect interaction
  - Direct questions
  - Quiz questions
  - Annotate features

Notes:

During teletraining sessions, dedicate undisturbed time for your session and expect interaction.
4. Course Content

4.1 RAC Tracks

Meteorologist vs Hydrologist

<table>
<thead>
<tr>
<th>RAC Tracks</th>
<th>MET, HYDRO</th>
</tr>
</thead>
<tbody>

<td>Storm-Based Warning Fundamentals</td>
<td>MET</td>
</tr>
<tr>
<td>Workshop Primer</td>
<td>MET</td>
</tr>
<tr>
<td>Workshop (Norman, OK)</td>
<td>MET</td>
</tr>
</tbody>
</table>

Notes:

Let’s discuss the RAC topics. You should complete them in order since they build on each other.

Most RAC students are Meteorologists who have been assigned to the Meteorologist Track, but a few are Hydrologists who have been assigned to the Hydrologist Track.
4.2 Topic: *Introduction to the WSR-88D System*

The Introduction to the WSR-88D System topic is a self-guided, narrated, web module that discusses the overall system description and covers the equipment groups. Completion time is about one hour.

**Notes:**

The Introduction to the WSR-88D System topic is a self-guided, narrated, web module that discusses the overall system description and covers the equipment groups. Completion time is about one hour.
4.3 Topic: Principles of Meteorological Doppler Radar

The Principles of Meteorological Doppler Radar topic consists of instructor guided web modules which cover how the WSR-88D collects, quality controls, and processes data into products. Completion time is about seven hours.

Notes:

The Principles of Meteorological Doppler Radar topic consists of instructor guided web modules which cover how the WSR-88D collects, quality controls, and processes data into products. Completion time is about seven hours.
4.4 Topic: Velocity Interpretation

Notes:

The Velocity Interpretation topic consists of instructor guided web modules which cover how to interpret both large and small scale velocity patterns. Completion time is about one hour.
4.5 Topic: Base and Derived Products

Notes:

The Base and Derived Products topic covers products and the algorithms that generate them. Delivery method consists of both instructor guided web modules and an instructor led training session. Completion time is about ten hours.
### 4.6 Topic: Base and Derived Products (Cont’d)

<table>
<thead>
<tr>
<th>Topic: Base and Derived Products (Cont’d)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Introduction and Base Products</strong></td>
</tr>
<tr>
<td><strong>Reflectivity Derived Products</strong></td>
</tr>
<tr>
<td><strong>Velocity Derived Products</strong></td>
</tr>
<tr>
<td><strong>Dual-Pol Derived Products</strong></td>
</tr>
<tr>
<td><strong>Precipitation Estimation Products</strong></td>
</tr>
<tr>
<td><strong>Base and Derived Products ILT (Review &amp; Case Study)</strong></td>
</tr>
</tbody>
</table>

*Students must register for Teletraining portion*

**Notes:**

The lessons in this topic are organized into sections.

The final lesson “Products Review & Case Study” is an Instructor-Led Teletraining session. You must pre-register in the CLC for one of the sessions.
4.7 AWIPS Convective Warning Fundamentals

Notes:

The AWIPS Convective Warning Fundamentals is a comprehensive introduction to all the AWIPS convective warning-related tools. All RAC students must take it, including “experienced” forecasters, because it’s important that everyone have the same WDTD approved skill set and be on the same page when they work together as a warning team in our Workshop simulations.

The delivery method is a blend of VLab, local WES-2 Bridge, and cloud WES-2 Bridge. Most of the VLab web pages and job sheets are taken on the live AWIPS. The initial practice videos must be taken on the local WES-2 Bridge workstation. Most of the content is independent of AWIPS builds, but there will be notes about any different AWIPS behaviors between builds in the VLab materials. The VLab job sheets and WES videos will prepare you to take an AWIPS proficiency test that is proctored by your local facilitator.

There is also a cloud-base WES-2 Bridge that will be used for the Hazard Services training and Hazard Services proficiency test that is also proctored by your local facilitator.

You can start the AWIPS Convective Warning Fundamentals immediately once RAC begins. Expect both VLab and WES-2 Bridge exercises to take 22-38 hours.
4.8 AWIPS Convective Warning Fundamentals:

WES Exercises

Notes:

The WES Exercises cover AWIPS applications that you will use in warning decision making in your job.

It is important for you to develop a basic proficiency with these different AWIPS tools even if your current office doesn't use all of them because you will likely use some of these at different offices in your career and you need the latest exposure to all these tools to make an informed decision about what tools ultimately work best for you. Because FSI has had some recent performance problems, it will be the lone optional part of the course. All the other applications are required for this course.
4.9 AWIPS Convective Warning Fundamentals:

Proficiency Test

Notes:

You will see the AWIPS Proficiency Test listed as an assignment in the CLC. It is a timed, paper exam administered by your training facilitator. The facilitator will observe your performance of specific AWIPS tasks. You will need to achieve a passing score of at least 70% on the test to receive credit. You may retake the test at the discretion of your training facilitator. After completing the exam your training facilitator simply scans the graded test and emails it to Michael.A.Magsig@noaa.gov and Mike will then enter the score in the CLC so you receive completion credit.

Note: You must complete the AWIPS Proficiency Test before the Convective Storm Structure and Evolution topic’s Applied Performance Drills.
4.10 AFUN: Hazard Services

Notes:

The Hazard Services component of AWIPS Fundamentals is provided in the cloud using an updated version of WES-2 Bridge and AWIPS. Two 27” monitors were sent to every office for use with RAC, and these monitors will need to be attached to a local machine on the Internet that we will refer to as the RAC In The Cloud (or RITC) workstation to take the training.

Instructions for students to submit a request for cloud slots to take the training in the cloud is provided in the student instructions doc emailed separately at the start of the course.

The Hazard Services proficiency test is similar to the AWIPS proficiency test and will be proctored by the facilitator. The test will take about 1-2hrs.

Because the Flash Flood Applied Performance Drills uses Hazard Services to issue a flash flood warning, the Hazard Services training needs to be taken before the Flash Flood Applied Performance Drills.
4.11 Cloud WES-2 Bridge Access

Notes:

The Cloud WES-2 Bridge access for Hazard Services-related training is easy. Students use a Google Form to request cloud slots at least one day in advance. 4hr cloud slots are designated for the Hazard Services training and the Flash Flood Applied Performance Drills (APDs) training, while the Hazard Services exam is 2hrs.

You will receive a calendar invite approximately within 1 business day of your request that you need to accept. After you accept, your Google Calendar will update. This calendar entry will be updated with the login information shortly before the session on the day of.

WDTD will chat you using Google Chat when your cloud instance is ready.

The cloud training is available between 830am and 6pm central time Monday through Friday, and WDTD will use Google Chat to assist if you encounter any problems during these times.

If you have any questions or have special circumstances come up, contact the AWIPS team at this email address.
4.12 Topic: Convective Storm Structure and Evolution

Notes:

The Convective Storm Structure and Evolution topic covers thunderstorms and all things severe. Delivery method is instructor guided web modules, Applied Performance Drills taken on the Weather Event Simulator (WES-2 Bridge), and an Instructor-Led-Teletraining (ILT) session. This is the longest topic; completion time is about twelve hours.
4.13 Topic: Flash Floods

Topic: Flash Floods

- Covers concepts, products and tools useful for flash flood forecasting and decision-making
- Delivery method
  - Instructor guided web modules
  - Instructor-Led-Teletraining (ILT) session
- Completion time
  - 3 hours (modules) + 2 hours (ILT)

Notes:

The Flash Floods topic consists of instructor guided web modules which cover concepts, products and tools useful for flash flood forecasting and decision-making. There will also be an Instructor-Led-Teletraining (ILT) session. Completion time is approximately three hours for the modules and 2 hours for the ILT.
Notes:

Along with the Hazard Services training, we have Flash Flood Applied Performance Drills that are taken in the cloud. These should be taken before your ILT. The completion time for the Flash Flood APDs is between 3 to 4 hours.
4.15 Topic: Warning Fundamentals

The Warning Fundamentals topic provides the fundamental knowledge and skills required to issue effective storm-based warnings. Training includes skills for basic proficiency in using some AWIPS storm analysis applications such as WarnGen and recommended strategies for polygon creation and placement. Delivery method is instructor guided web modules and an Instructor-Led-Teletraining session. Completion time is about five and a half hours.
**4.16 Workshop Primer**

**Notes:**

One very important exercise that will help prepare you for the week of simulation nirvana at the workshop is the 2-3hr Severe Workshop Primer.

In this catalyst for the workshop, you will start to put everything together to issue warnings using WES-2 Bridge and get a head start on using the same AWIPS procedures you will use at the workshop.

The Workshop Primer should be completed any time in the week before the workshop (or as near as you can; NOT too early), so you refresh your skills right before you come to the workshop. That way you can focus on your higher-order learning skills, instead of remedial training at the workshop.

The Workshop Primer features demonstration videos playing on one monitor while you practice the same steps on the other monitor. Afterwards, complete the assignment (which is a survey) in the Commerce Learning Center (CLC) by noon Central Time the Friday before your workshop.

WDTD will mark the lessons complete in the CLC after the facilitator sends Sarah the score.
4.17 AWIPS/WES Course Materials

Notes:

Most offices already have the WES-2 Bridge materials installed for this class's training. If you do not have the WES cases, we will send you the installation discs at the start of the course. This involves the AWIPS Convective Warning Fundamentals videos, the Convective Storms Applied Performance Drills videos, and the Severe Workshop Primer videos.

There are some further updates to the WES that our WES folks will install on your WES-2 Bridge workstation at the start of the course, so you will have everything you need.

The AWIPS proficiency test and Hazard Services proficiency test will be emailed to the facilitators at the start of the course.
4.18 Lesson Completions – Stay on Pace!

Notes:

Please be aware that RAC is a HUGE course (over 100 hours) and all distance learning must be completed before a student is permitted to attend the workshop. Thus, it’s important to stay on pace. It takes a big time commitment from the student and support for that time commitment from co-workers and the management team.

The RAC Project Leader (Bobby Prentice) will send status updates which include the latest “RAC Training Completion Report” and a course completion timeline in order to help keep you on pace.
5. Workshop

5.1 RAC Workshop

Notes:

The Workshop is the culmination of RAC. It brings together everything you've learned, and more, into a laboratory and simulation environment. Most of your time at the workshop will be in the lab. Typically, you'll work with two (2) other forecasters and go through events in displaced real-time mode together.
5.2 RAC Workshop:

Prerequisites

- All distance learning must be completed before the workshop, including:
  - All end-of-lesson quizzes
  - AWIPS/Hazard Services Tests
  - WES Exercises
  - Workshop Primer
- Arrive at workshop “warning ready” including:
  - AWIPS “knobology”
  - WarnGen fundamentals

Notes:

You must complete all distance learning components before you may attend the workshop including: Lessons quizzes, AWIPS and Hazard Services Proficiency Tests, WES exercises, and the Workshop Primer. Students must arrive at the workshop “warning ready” including AWIPS “knob-ology” and WarnGen fundamentals. We want you to get the basics out of the way so we can work on your higher order warning forecaster skills at the workshop.
**5.3 RAC Workshop:**

*Delivery Method*

- In-residence at the National Weather Center (NWC)
- You will be automatically registered via the CLC
- Completion time
  - 40 hours (8 am Monday - 5 pm Friday)
  - Due to flight schedules, many students will be unable to fly home until Saturday!

*Notes:*

The RAC Workshop delivery method is in-residence at the National Weather Center (NWC). You will be automatically registered in the CLC. Completion time is 40 hours for the week, 8 am Monday through 5 pm Friday. Due to flight schedules, many students will be unable to fly home until Saturday!
5.4 RAC Workshop:

Lodging

- Hilton Garden Inn
  - Shuttle bus service to and from the National Weather Center (NWC) will be provided

Notes:

Workshop lodging will be at the Hilton Garden Inn located near Interstate 35 in west Norman. This is a twelve (12) minute drive from the National Weather Center (NWC). Shuttle bus service to and from the NWC will be provided.
6. Training Facilitator Responsibilities

6.1 Training Facilitator Responsibilities

Notes:

Your training facilitator plays a critical role. He/she must ensure you have adequate training time built into your work schedule, monitor your progress to ensure you stay on pace, and provide support and guidance.
6.2 Facilitator Responsibilities:

**AWIPS Proficiency Test**

* Install & test local WES exercise materials
  - Testing instructions provided with AWIPS Convective Warning Fundamentals release
* Proctor AWIPS Proficiency Test and Hazard Services Proficiency Test

**Notes:**

Your facilitator must also install and test the local WES exercise materials (unless they've already been installed) and proctor the AWIPS Proficiency Test and Hazard Services Proficiency Test. Testing instructions are provided with the AWIPS Convective Warning Fundamentals release.
7. Support

7.1 RAC Web Page

Notes:

The RAC web page is a good source for course information and support. Note...although the course outline has links to lessons on our WDTD web site and the CLC, you must access the lessons from your RAC curriculum on the CLC to receive credit.
7.2 VLab: RAC AWIPS Convective Warning Fundamentals web page

The VLab's AWIPS Convective Warning Fundamentals web page has all the documentation about WES-2 Bridge materials, shipping schedule, procedures download, and installation guidance. It should answer most of your AWIPS and WES-2 Bridge questions.
7.3 RAC Support

There are four sources of RAC support:

1. Your office’s training facilitator (i.e., SOO/DOH).
2. RAC Web page https://training.weather.gov/wdtd/courses/rac/
3. The RAC Help Email list nws.wdtd.rachelp@noaa.gov – Better for general inquiries and quick responses
4. Contact instructors directly

The RAC Project Manager (Bobby Prentice) will also send RAC status updates via e-mail.
7.4 Questions?

Notes:
If you have questions about this orientation, contact the RAC Help list (nws.wdtd.rachelp@noaa.gov) or ask them verbally during the Orientation's Question and Answer webinar.
